Cables, Switchers and Distribution Amplifiers

Cables

Make sure you use Shielded cables. The longer the cable, the thicker they are. If they are not shielded, they can interfere with one another and lead to signal distortion.

Distribution Amplifiers

They server two functions: splitting signals for multiply displays and boosting the signals. They are commonly used to save cable runs in a court room. For example, you are going to set up a monitor for a witness, judge and clerk. Instead of running 3 cables to the bench, you run 1. You use a distribution amplifier to split the signal to the 3 monitors at the bench.

DA1506RT – 2 in, 6 out Distribution Amplifier

DA1906SX – 1-in, 3-out Distribution Amplifier

Switchers

Switchers are used to manage multiple inputs in a courtroom set up. They allow you to easily change input signals from a plaintiff to a defendant or even to a lectern source.

MX2106AV – 2-in 2-out VGA Switcher with audio.

Used for simple setups with only 2 inputs.

MX2456RM – 6-in, 1-out with audio.

Used for complex set ups with multiple inputs.
